

What must today's C-Suite know about security and compliance risks in an increasingly high tech environment?

THE CYBERSECURITY BASELINE

In this engaging and practical workshop, Mark describes the landscape and explains the top security requirements for business in the era of Artificial Intelligence, Machine-to-Machine transactions, the App model, cryptocurrencies, the Darknet and big data, going online to find stolen financial services data, allowing the audience to hack his iPhone and demonstrating the workings of the Darknet.

- Lessons from recent events; the value of data
- The impact of security failures in the GDPR era
- Emerging threats; beyond database hacking
- People as a vulnerability; social engineering
- People as a security asset; the human firewall
- Security infrastructure demystified
- Monitoring, controls and testing
- A baseline model for assessing security

Delivered by **Mark Johnson**, CISM, CISM, OSINT-trained, a former military intelligence officer, drug enforcement agent & global head of network fraud & security, now engaged by the City of London Police, the National Police Chief's Council, CIFAS, the International Compliance Association, and MIS Training Institute.
